

**2023-2024 season**

Charles Sturt University is one of a few nationwide organisations that provide herbicide resistance testing. This service is available to improve efficiency of herbicide use, there is no point applying a herbicide that is ineffective because the target weed is resistant. Testing will improve weed management decisions, help to minimise herbicide wastage.

**How to collect suspect seed**

The best time to collect suspected resistant weed seed is when it is close to maturity, which often occurs **before the crop is to be harvested**. The steps involved in seed collection are:

1. Collect at least **1 cup full of clean weed seed (more for wild oats and wild radish)** either from plants randomly throughout the paddock or from screenings when cleaning seed. **An A4 envelope full of seed heads will also be sufficient. Insufficient seed will reduce the number of herbicides that can be tested.** Each paddock will need to be sampled **separately** as results may vary. **NOTE: More**

**seed collected the better especially for wild oats.**

2. Place each sample in a sealed paper bag. Place this bag and the **Identification slip** (this page) in an envelope. If multiple samples are being sent in the same envelope, clearly identify each sample bag and herbicides to be tested.
3. Mail samples as soon as possible to avoid seed deterioration.
4. Address to **Herbicide Resistance Testing, School of Agricultural and Wine Sciences, Charles Sturt University, Locked Bag 588, Wagga Wagga, NSW, 2678.**

I agree to have the following tests (over page) conducted providing sufficient viable seed is made available, and will be charged at the stated prices.

Purchase Order No. \_\_\_\_\_ Customer signature: \_\_\_\_\_

**Submission of this sample to the Charles Sturt University Herbicide Resistance Testing Service implies that:**

- the landowner agrees to its submission
- the landowner agrees to the nominated agent receiving all results

**License to Intellectual Property**

- (1) The Client(s) assigns to Charles Sturt University exclusive intellectual property to the data.
- (2) Charles Sturt University licenses back to the Client(s) an irrevocable, non-exclusive license to use the results for internal purposes

**SAMPLES MUST BE RECEIVED BEFORE 1<sup>st</sup> APRIL TO BE TESTED THIS YEAR.**

**What to expect**

- Charles Sturt University will acknowledge receipt of your sample(s) either direct or via the nominated agent.
- **As most weed seeds have a dormancy period testing does not begin until February. Tests take 8-10 weeks to complete with tests sown every 2-3 weeks. Results may be delayed in samples with poor germination.**
- If the results are required for pre-season planning it is essential that samples are sent prior to mid-January, to allow enough time for the test to be carried out, and results returned.
- Results will be released to you or via your local agronomist for interpretation as soon as they are available. These results include a resistance category and response curve for each herbicide tested.
- Further queries should be directed to your agronomist / agent, or Charles Sturt University on 02 6933 4001

**Tick test(s) to be done**

(all prices include GST)

**Ryegrass cross resistance test (any five selected herbicides) Cost \$440**

**Specific herbicides**

- Herbicide 1: .....
- Herbicide 2: .....
- Herbicide 3: .....
- Herbicide 4: .....
- Herbicide 5: .....

or

**Standard herbicides**

- Hoegrass® (Group 1 fop)
- Select® (Group 1 dim)
- Glean® (Group 2)
- Trifluralin (Group 4)
- Simazine (Group 5)

**Ryegrass cross resistance test plus Roundup® (Group M) Cost \$500**

**Wild oats cross resistance test (any four selected herbicides) Cost \$440**

**Specific herbicides**

- Herbicide 1: .....
- Herbicide 2: .....
- Herbicide 3: .....
- Herbicide 4: .....

or

**Standard herbicides**

- Topik® (Group 1 fop)
- Select® (Group 1 dim)
- Atlantis® (Group 2)
- Avadex Xtra® (Group 15)

**Wild oat cross resistance test plus Roundup® (Group M) Cost \$500**

**Broadleaf cross resistance test (any four selected herbicides) Cost \$440**

(including Wild Radish, Wild Turnip and Indian Hedge Mustard)

**Specific herbicides**

- Herbicide 1: .....
- Herbicide 2: .....
- Herbicide 3: .....
- Herbicide 4: .....

or

**Standard herbicides**

- Glean® (Group 2)
- 24D Amine (Group 4)
- Atrazine (Group 5)
- Brodal® (Group 12)

**Broadleaf cross resistance test plus Roundup® (Group M) Cost \$500**

**Individual herbicides (circle herbicides required)  
for any weed species**

**Cost 1<sup>st</sup> herbicide \$150  
Cost each extra herbicide \$100**

**Herbicide additional to cross resistance test \$60**
