

Pause, Version History, Revise Deadline

How do I assess a student's work at a defined point while allowing it to remain developmental?

Quick answer:

PebblePad submissions can remain connected to a student's developing Workbook, so assessment does not always require another submission.

Use **Pause** when you need to temporarily stop submission updates while work is being reviewed or assessed. Use **Version History** when you need to view the Workbook as it existed at an earlier point in time.

Use **Revise Deadlines** when a student needs additional time to make changes to a submission.

At a glance:

	Pause	Version History	Revise Deadlines
Temporarily stop submission updates	✓		
Review work from an earlier point		✓	
Allow additional time to revise			✓
Keep the Workbook developmental overall	✓	✓	✓
Support a formative checkpoint	✓	✓	

Important to know:

- When a paused assignment is played again, submission updates synchronise again.
- Specific revised or extension dates can be applied to individual students where a submission date is configured.
- A formative checkpoint does not necessarily require the student to make another submission.
