

### Rural Clinical Placements: Your journey starts here

### Rural Clinical Placements: How to grow your own

The combination of theory, videos and Q&A [was most beneficial] (eMRs)

I greatly benefitted from the introspective activities and the videos and listening to the perspectives of Aboriginal people first hand. (Preparing for placement in an Indigenous health context)

How in-depth and informative it was to help prepare us to become culturally aware, sensitive and safe in the workplace (Preparing for placement in an Indigenous health context)

[Hearing] rural experiences first hand from professionals. Worked in rural community before and this has invigorated my spirits to go back to rural and integrate as a community member. (Why rural? Try rural!)

Loved how simple and effective the breathing activities were! (Self-care for clinicians)

It made me realise that my working environment can do more to be culturally aware and diverse (Developing cultural awareness and sensitivity)

I loved the interactive component. It forced a deeper level of engagement. (Developing cultural awareness and sensitivity)

I found this module very useful. Lots of good resources to help enhance my own work as a supervisor as give me ideas to encourage and support colleagues to take students. (Enhancing the rural experience)

### Telehealth: Embracing technology in healthcare
