Interact2: Removing Duplicate Entries in Grade Centre
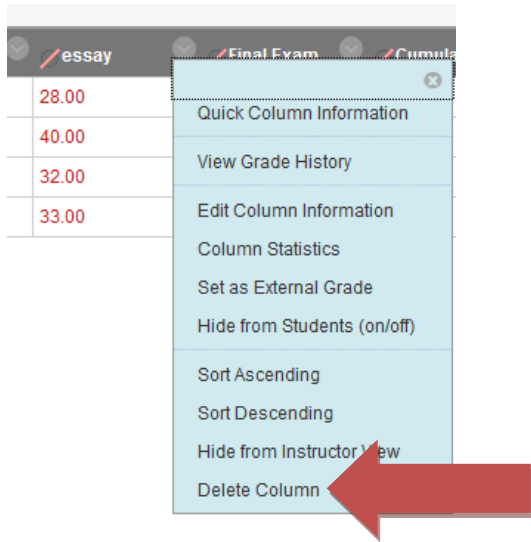

Overview

Likely scenario: Tests were created in an organisation site and then copied to the subject site, which may also contain blank tests generated from the Subject Outline. Note that this situation should only arise if assessment items were added after publication of the Subject Outline. If added before Subject Outline publication, an error would be generated if there were assessment items already in Grade Centre. In that case the Subject Outline won't be published.

1. Remove any assessment item columns from Grade Centre that don't have name, due date and weighting as specified in Subject Outline.

2. Remove any non-required assessments from any Interact2 content area. This will remove the item as well as the column in Grade Centre.

3. Remove any remaining duplicate columns from Grade Centre.

4. Add relevant assessments to the calculated grade/cumulative mark columns.

5. If there are duplicate calculated grade and cumulative total columns, remove the duplicate column with the later date (manage > column organisation).
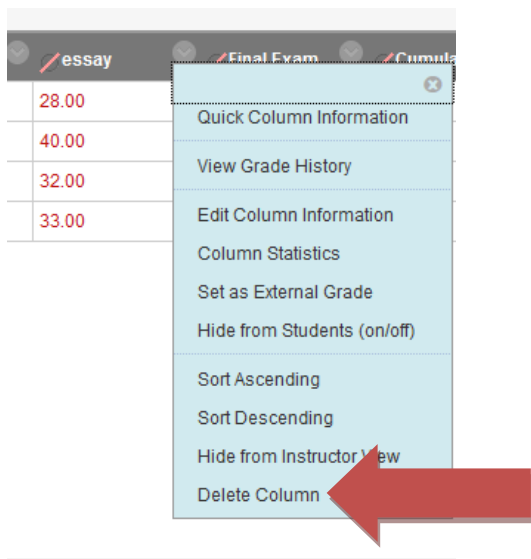

Details

1.   Remove any assessment item columns from Grade Centre that don't have name, due date and weighting as specified in Subject Outline.

2.   Remove any assessment item columns from Grade Centre that don't have name, due date and weighting as specified in Subject Outline.

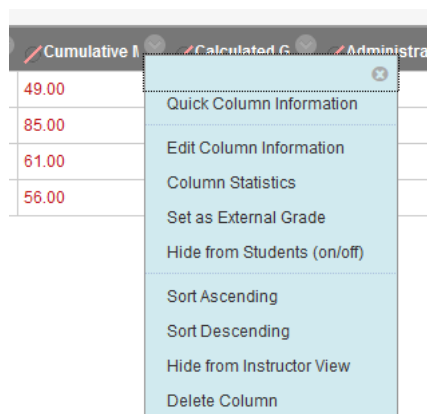

3.   Remove any remaining duplicate columns from Grade Centre.
       (as step 1)

4.   Add relevant assessments to the calculated grade/cumulative mark columns.

Edit Column Information

Select Columns to be included in Calculated Grade and Cumulative Mark columns.

5.   If there are duplicate calculated grade and cumulative total columns, remove the duplicate column with the later date (Go to Manage > Column Organisation to view **Date Created**.)
