

Workspace vs Workbook

What does each do, and which elements relate to learning, submission and assessment?

Quick answer:

A **Workbook** is what the student works in. It contains the structured activities, prompts, reflections and evidence they complete in PebblePad.

A **Workspace (ATLAS)** is where submissions and the assessment process are managed, including assessors, feedback, grades, deadlines and reporting.

Think of it this way: **the Workbook structures the learning; the Workspace manages the assessment.**

At a glance:

Workbook	Workspace (ATLAS)
✓ Where students complete activities	X
✓ Where students record reflections and evidence	X
✓ Structures the learning experience	X
X	✓ Receives and organises submissions
X	✓ Manages assessors and sets (groups)
X	✓ Manages feedback and grades
X	✓ Manages assessment dates and admin
X	✓ Provides assessment reporting

Important to know:

- Students work in their Workbook and submit it to an ATLAS Workspace for assessment.
- A submitted Workbook can continue to develop unless editing or submission updates are restricted.
- Brightspace grade passback is managed through the linked Workspace, not from the Workbook itself.
